

CPAK 2006

CD/DVD Order Form Recording Services Presented By VWTAPES.COM

CD's are \$10 each. DVD's are \$20 each. Special Conference Offer: Get a full set of CD's for only \$120 or a full set of DVD's for \$240!

CD DVD

1. Graham Hancock

Graham shows evidence of ancient civilizations around the world and discuss the idea that our distant ancestors may have been more prolific and advanced than heretofore believed.

CD DVD

2. John Major Jenkins

John focuses on the state of knowledge held by the Maya and their cosmology. He looks at their views concerning precession and cycles, including the possible meaning of the Winter Solstice Galactic Alignment in 2012.

CD DVD

3. John Anthony West

John introduces the sacred science of ancient Egypt, the body of knowledge responsible for Egypt's temples, tombs and pyramids – which move us, even in ruins, because their builders were masters of a science of cosmic principles. This knowledge was expressed in geometry, measure, harmony and proportion, and communicated through myth and symbolism. The result was literally magical. West summarizes the elements of this great ancient doctrine that fused art, science, philosophy and religion into one coherent whole –the meaning behind the magic.

CD DVD

3. Robert Schoch

Robert continues to build on the topics brought up by John Anthony West, focusing on Geological evidence to support the theory that Egyptian civilization is older than currently thought in mainstream academia.

CD DVD

5. John Burke

John focuses on megaliths throughout the world, and the ancient technology to which they seem to point. Specifically, he discusses the idea of harnessing energy, and the influence that energy can have in agricultural applications, which we are just now rediscovering today.

CD DVD

6. Boris Fritz

Boris asks the question, "If these civilizations were so advanced, then what happened to them, and what happened to their technology?" He introduces the concept of the Yuga Cycle and its variations in ancient cultures throughout the world. He shows the strong ties these beliefs have to the Precession of the Equinoxes.

CD DVD

7. Walter Cruttenden

Walter discusses the state of precession theory and offers a new explanation that better fits the apparent motion of the stars and ancient myth and folklore. He introduces the concept that our Sun has a partner star and our motion around this star produces the precession of the equinox, and indirectly, the rise and fall of civilization.

CD DVD

8. Day One Panel Discussion

CD DVD

9. Graham Hancock

Bonus Presentation

CD DVD

10. John Dering

John addresses the question "So What?" He will show how being in a binary system can actually have a real effect on humanity, and that we are constantly affected by the invisible forces in space.

CD DVD

11. Richard C. Hoagland

Richard explores the possibility that a "new physics" – based on a non-electromagnetic interaction between the solar system's cyclic, orbital motion through space, and documentable cyclic biological and geological changes on Earth – explains the profound, periodic "planetary loss of memory" associated with the Vedic Yugas and Plato's "Great Cosmic Year."

CD DVD

12. Claude Swanson

Claude discusses the phenomena of the higher ages and new abilities we might see emerge in humanity as we approach the Higher Ages.

CD DVD

13. Geoff Marcy

Geoff discusses the search for Earth-like planets, the prospects for life on them, and the search for intelligent life. He tells of NASA's quiet adoption of a new agenda that departs from its previously stated goals, resulting in cancelation of two major missions.

CD DVD

14. Day Two Panel Discussion
